

Remove the waste. Release the power.

Klas Moreau
CEO

klas.moreau@zptcorp.com

Datacenters consumed 2% of the electricity produced 2021

...and is expected to grow 5-fold to 2030

Smart devices may each have a small contribution, but 5.3 billion unique subscribers globally, adds up to a significant energy footprint.

ICT is the fastest growing energy consumer industry

**Our research shows that
Up to 70% of the memory of ICT equipment
contain unnecessary information!**

**ZeroPoint technology
puts this waste to work**

**The product and business value is up to
50% more Performance per Watt**

The Innovation ZeroPoint technology

Data Compression

ZeroPoint Proprietary Algorithms

- 2-4x Compression Ratio
- **Ultra-fast**, high performance and low latency
- General purpose and lossless
- Real time analysis and training

Data Compaction

ZeroPoint Proprietary Algorithms

- **Real-time**, high performance and low latency
- Adaptive in real time

Memory Management

ZeroPoint Developed Driver

- **Transparent** to operating system and application
- Hardware accelerated

The Customer

Smart mobile

Server

**Embedded
System**

The Opportunity

“Requests per Watt is one of our defining characteristics when testing new hardware ...

We continually strive to reduce our operational costs **and power consumption reduction is one of the most important parts of this.** It’s good for the planet and we can fit more servers into a rack, reducing our physical footprint.”

Quote from Cloudflare server evaluation

Environmentally friendly and financially cleaver

Efficient use of energy

A data center could save 20% of the energy cost per year (OPEX).

Facebook's Luleå site – 10 M€ saving per year

Efficient use of memory

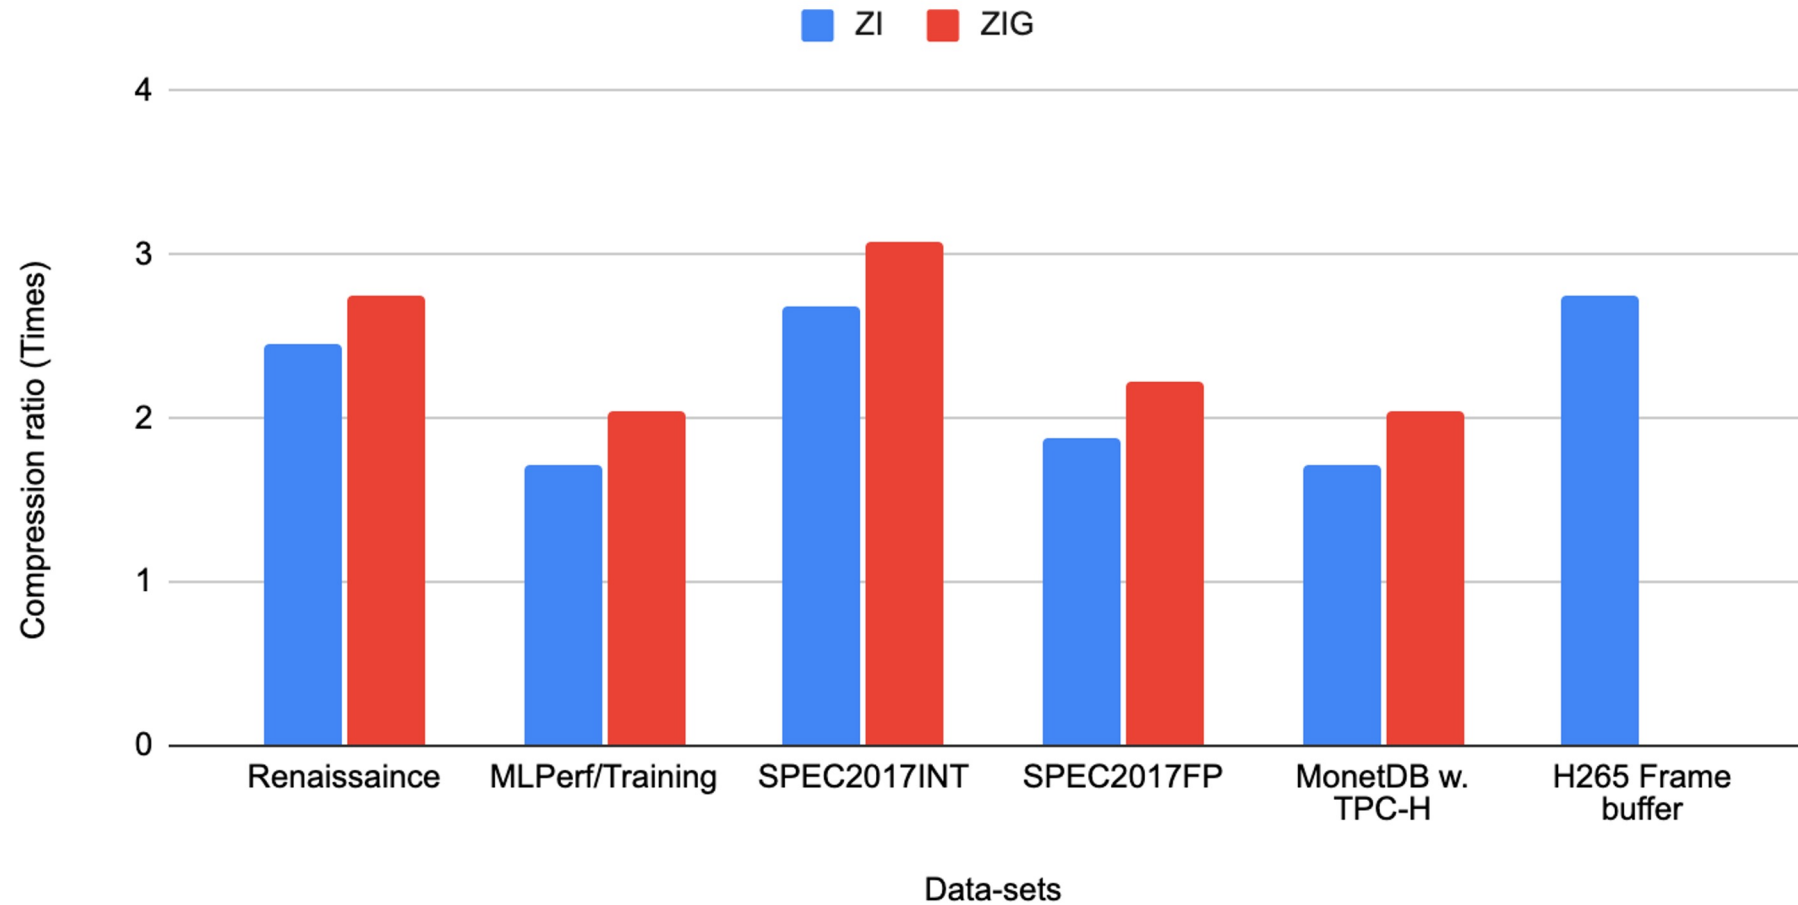

A data center could cut 15% of the server investment cost (CAPEX).

Memory is 30% of server cost today, estimated to become 40% in 5 years.

Performance

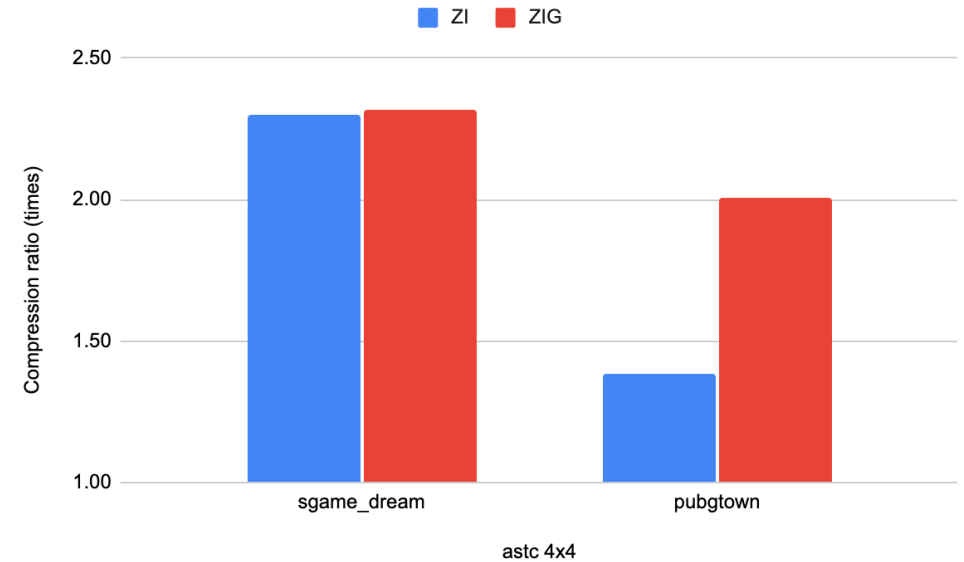

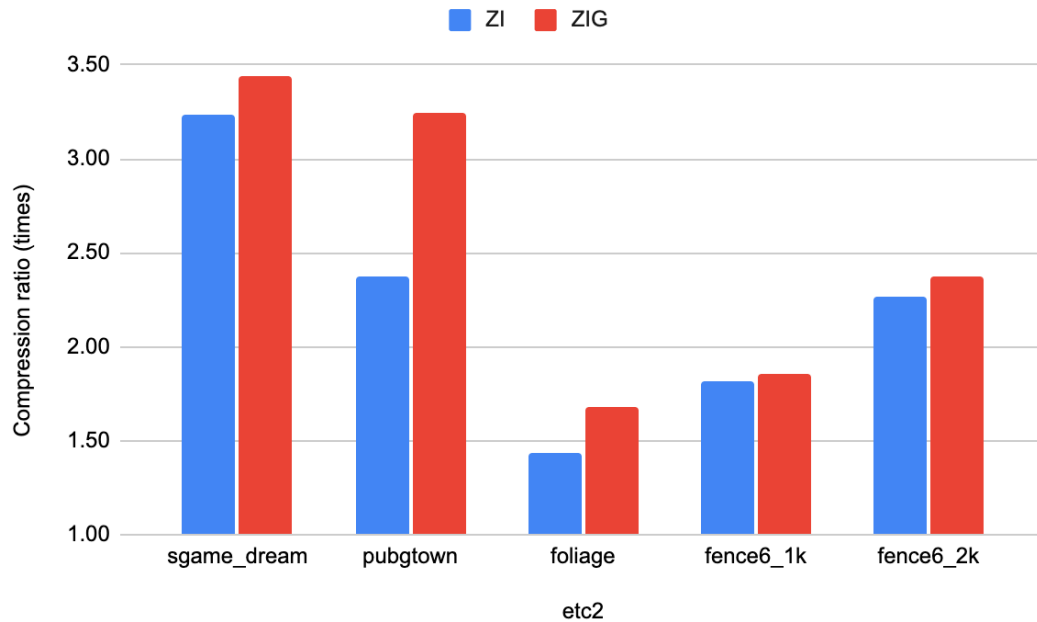

Compression performance on various server data-sets

(Higher is better)

Robust compression across diverse data sets

Compression performance on various smart device pre-compressed graphics data-sets (Higher is better)

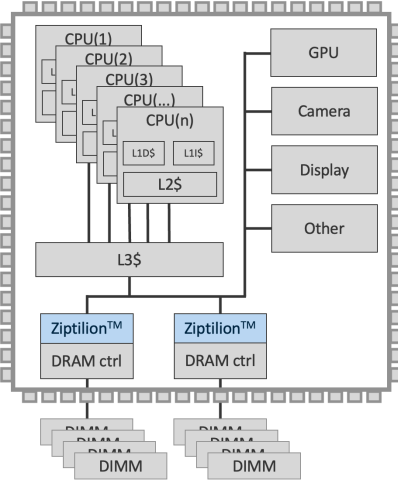

Technology availability

Products

Ziptilion™ Bandwidth

Up to 50% main memory bandwidth acceleration

Scheduled to be released: Q4-2022

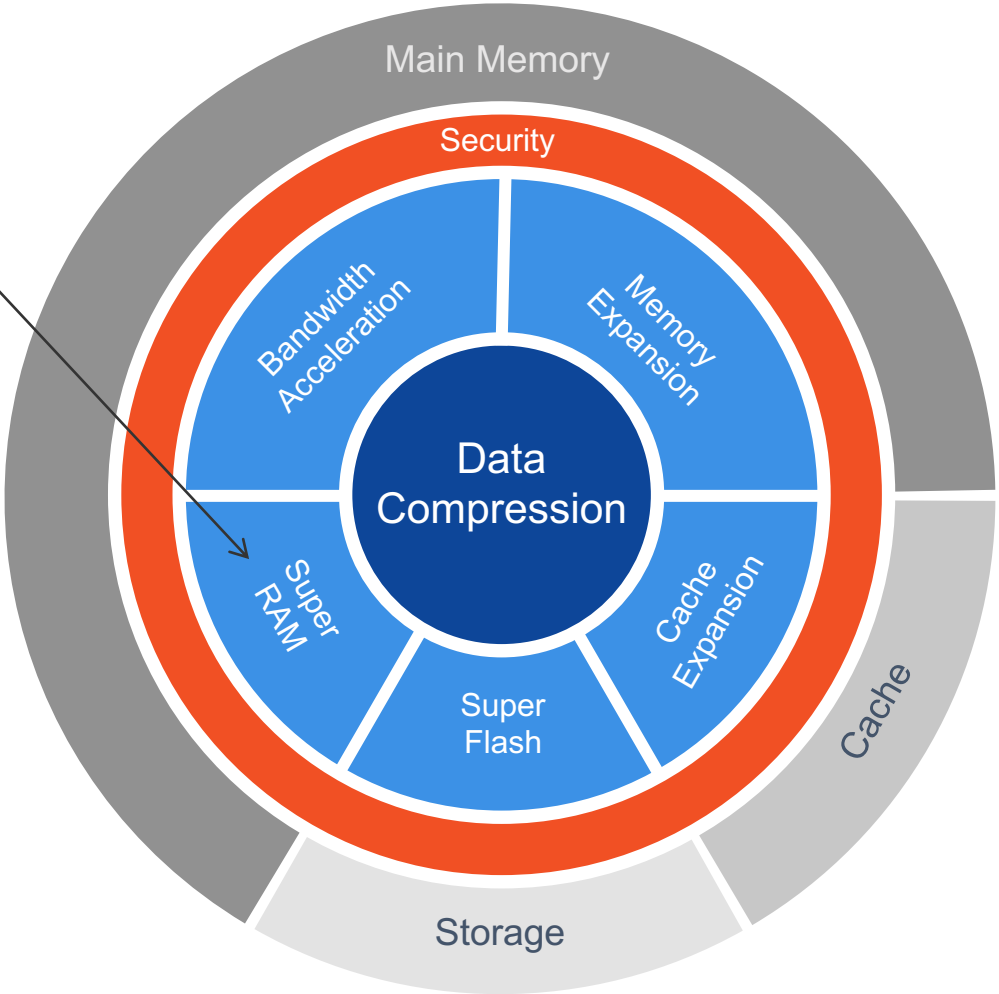

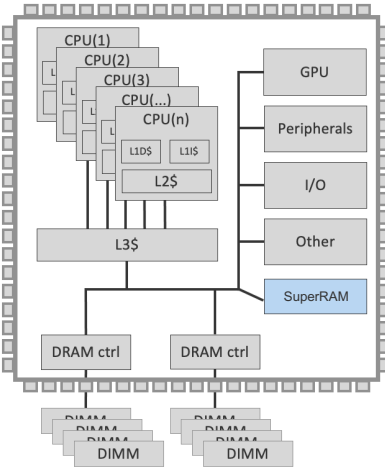

Products

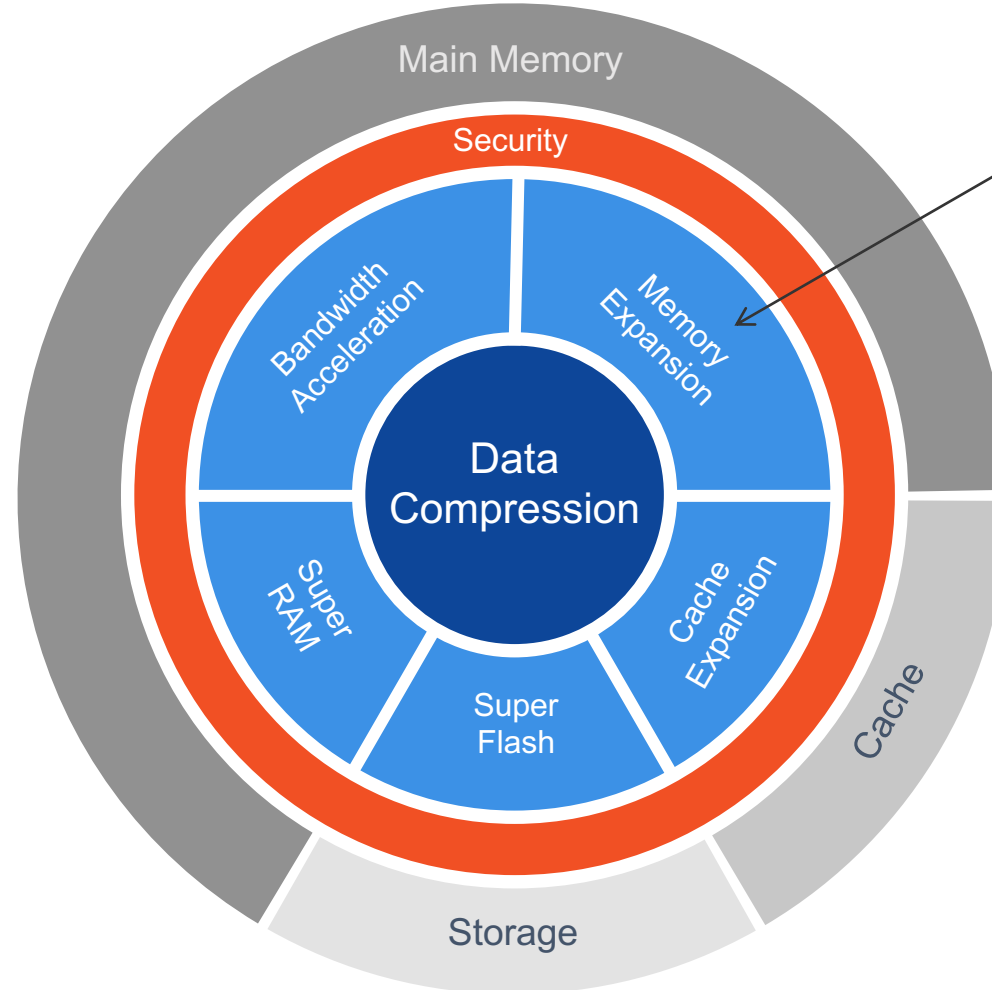

SuperRAM

High performance and low latency
hardware accelerated zram/zswap at
unmatched power efficiency

Released – Product available

Products

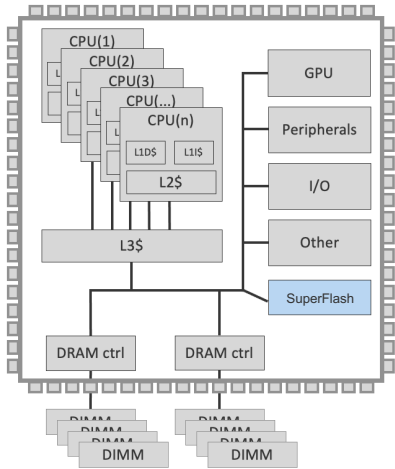

Ziptilion™ Memory Expansion

2-3x main memory expansion

*Scheduled to be released:
(contact for details)*

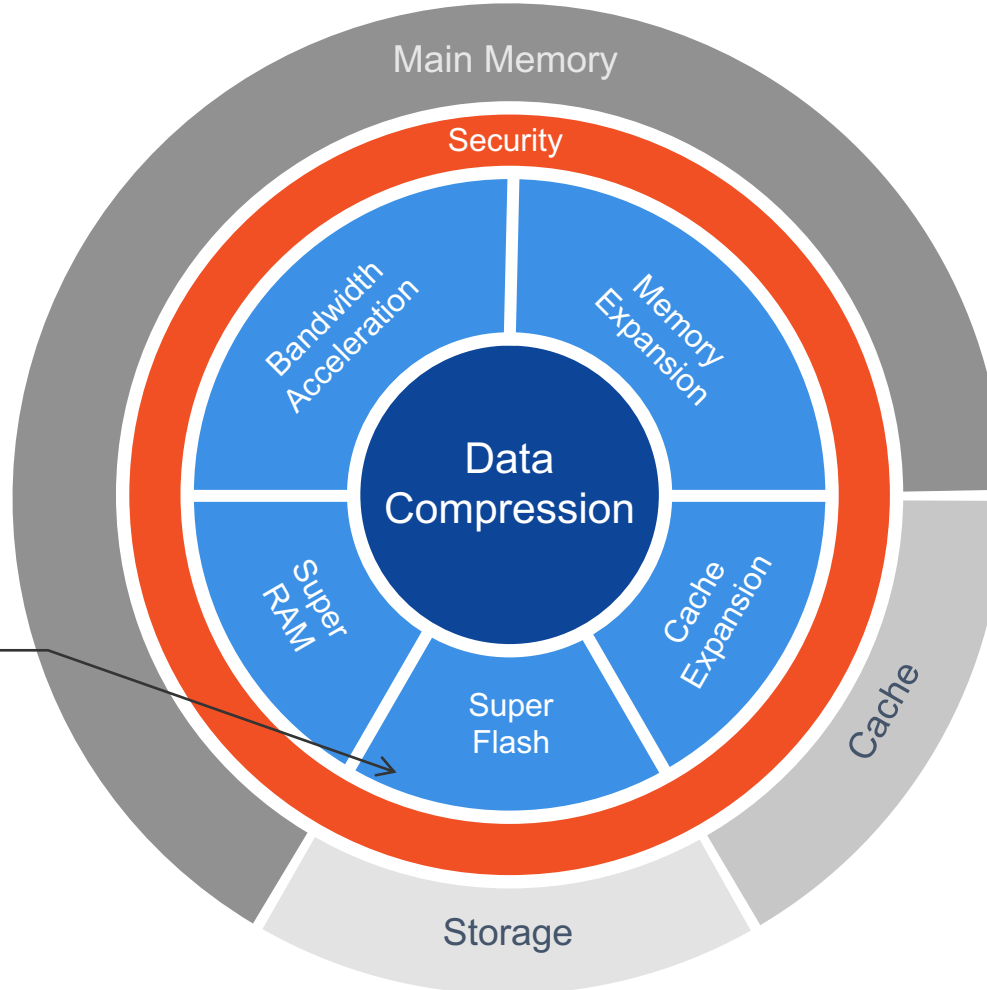

Products

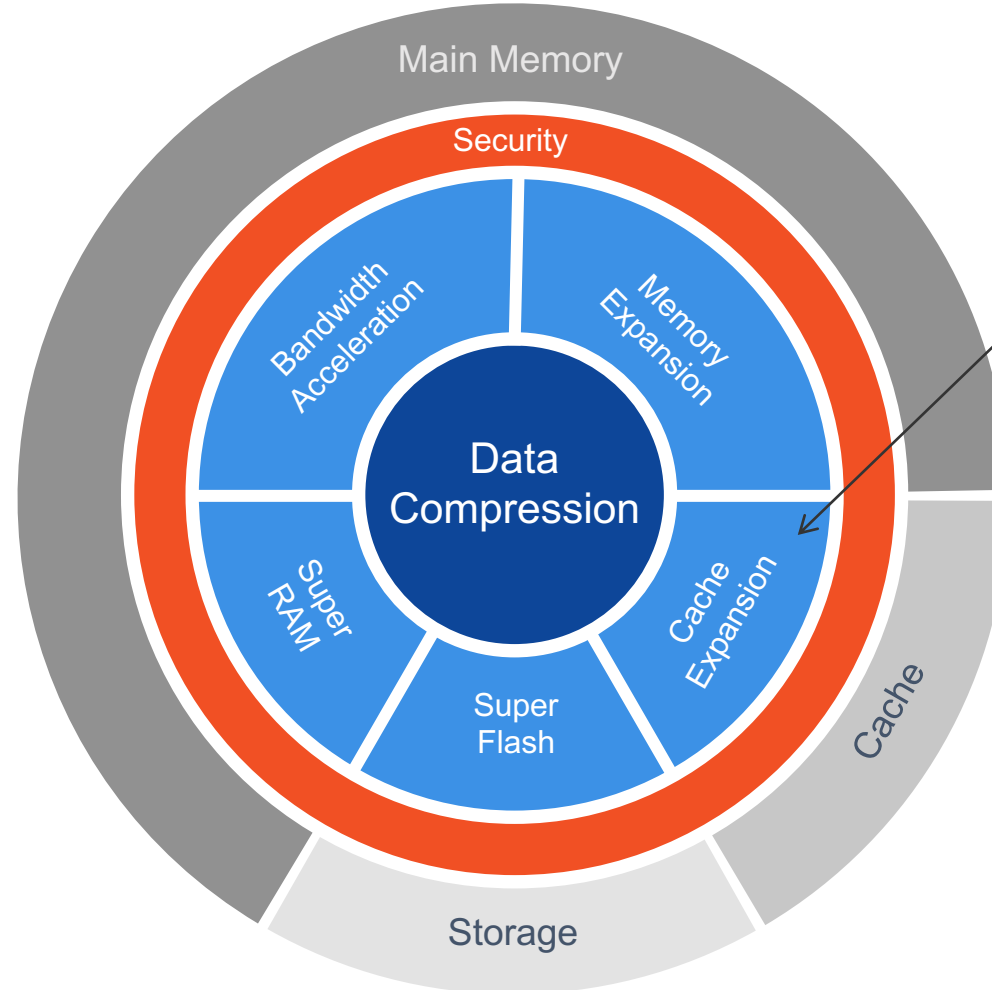

SuperFlash

High performance and low latency
2-3x hardware accelerated
flash compression at
unmatched power efficiency

*Scheduled to be released:
(contact for details)*

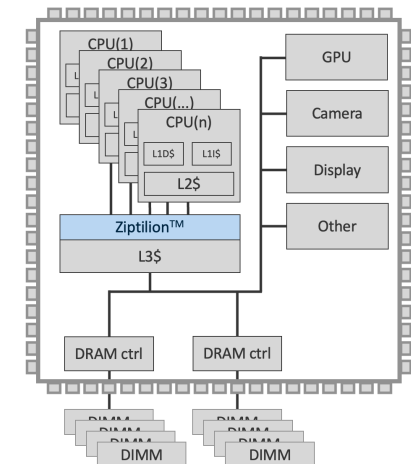

Products

Ziptilion™ Cache Expansion

2-3x last-level cache capacity expansion

Research: (contact for details)

ZeroPoint technology in EPI-SGA2

- EPAC 2.0 (European Processor Accelerators) contain a memory compression module developed by ZeroPoint Technologies.
- The module offers an average of 2x compression ratio which translates into significant memory bandwidth acceleration at unmatched power efficiency.
- It is built on ZeroPoint's proprietary state of the art general purpose and lossless algorithm.

About ZeroPoint Technologies

Prof. Per Stenström – CSO Co-founder/inventor

- Professor at Chalmers University of Technology.
- Invented main memory compression technique in 1990's
- Internationally renowned memory expert
- Senior industry experience at Sun Microsystems
- Wide industry network.

Dr. Angelos Arelakis – CTO Co-founder/inventor

- Memory architecture and ultra-fast data compression expert.
- Recipient of King Carl XVI Gustaf's award for science, technology and environment.

**Company founded 2016, over
50 man-years invested in R&D**

20 person R&D team

- Compression Algorithm Research & Development
- Memory Architecture
- High Volume ASIC/FPGA Development and Manufacturing

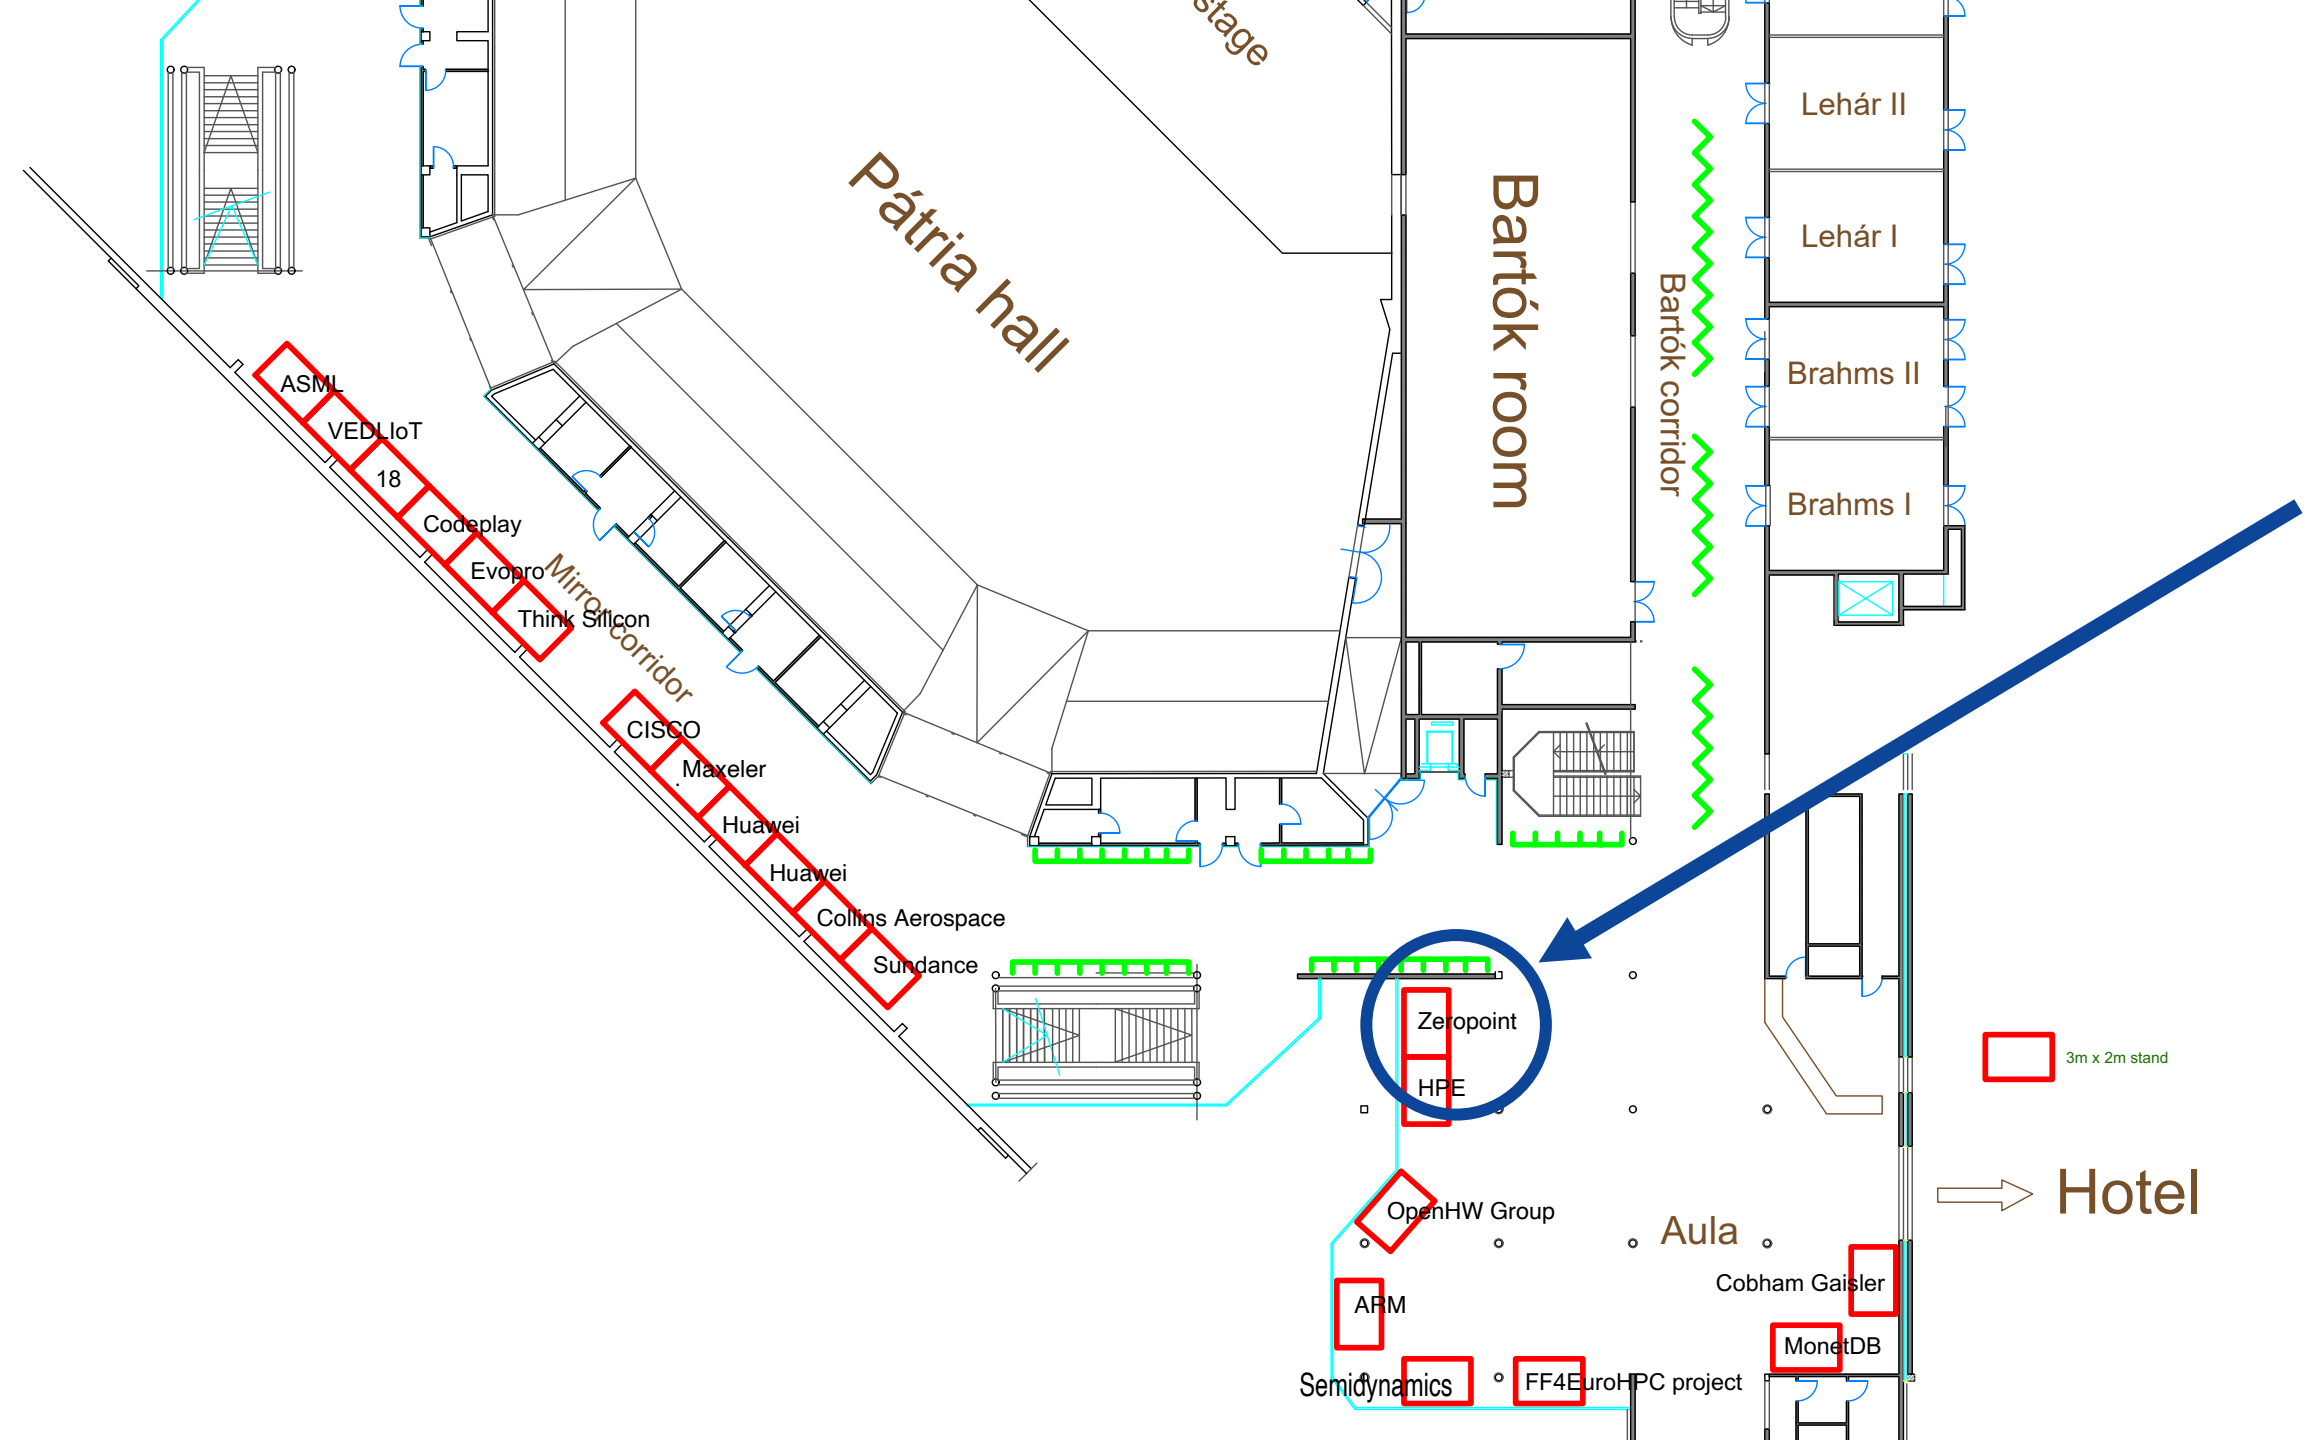

arm

**ZeroPoint technology
puts wasted resources to work**

**The product and business value is up to
50% more Performance per Watt**

Remove the waste. Release the power.
